

Drip Edge Enhancer™

For water wrapping behind the gutter

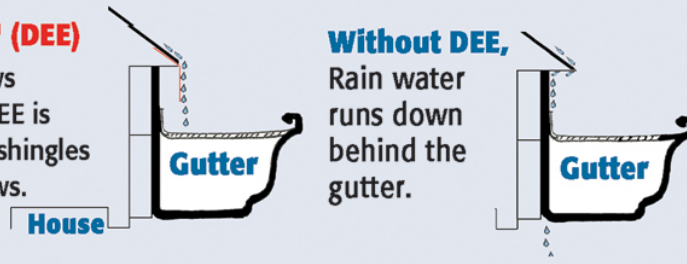

There is often a preexisting condition that allows water to flow off the roof, wrap up against the fascia and ultimately behind the gutter. This is NOT a gutter issue. This is a condition with the positioning of the shingles and drip edge. If not addressed, this can lead to wood rot and system failure. We try hard to determine the need for this in advance, but we can't always

Gutter Products

determine this need until the gutters are installed. If this condition occurs, we have developed a proprietary product - Drip Edge Enhancer™ to solve this problem. In most applications it goes under the shingles, on top of the existing shingles, and creates a pronounced drip edge so that the water can no longer

DripEdge Enhancer™ (DEE)

With DEE, the water flows directly into the gutter. DEE is installed under the roof shingles with stainless steel screws.

Gutter Edge™

For staining on front of the gutter

This is a common problem. The dirt and pollution in the air mix with rain and that combination runs along the front of the gutters, leading to staining and tiger striping. The bond that is created between the dirt and aluminum is very difficult to clean...it takes special cleaners to remove the staining. With

Gutter Edge™ we can eliminate this problem for ever. Gutter Edge creates a little „cover% for the front edge of your gutter, protecting it from future staining. It comes with a lifetime guarantee against staining. It comes in various colors to match your gutter system.

Fascia & Soffit Wrap

Trim Replacement

To reduce the maintenance on your house and to help protect the wood and trim on your home, either wrap them in aluminum or replace them with a composite material. The benefit of fascia wrapping is that you'll never need to paint those areas again. The benefit of composite material is that they will never rot. Please let us know how we can help you enhance your home.
